Professional summary

Full-Stack Web Developer who builds responsive, user-friendly web applications with JavaScript, TypeScript, React, Node.js, Express.js, and MongoDB. I built and deployed two full-stack apps: an e-commerce store with authentication and an admin dashboard, and an invoicing and inventory app with owner and staff roles, PDF invoices, and automated tests. My Business Administration background shapes how I decide what a product needs to achieve. Open to remote, freelance, contract, and full-time opportunities.

Work experience

Full-Stack Web Developer

Self-employed (freelance) | October 2025 to present

- Built BizTrack, a full-stack invoicing and inventory app for small shops: recording a sale updates stock automatically, invoices download as PDFs, and a dashboard shows daily sales, low stock, and unpaid invoices.
- Designed owner and staff roles with JWT authentication so staff never see cost prices or profit, and saved the price and cost on every sale so past records never change.
- Prevented overselling with atomic stock updates, and wrote 22 automated API tests with Jest and Supertest.
- Built ShopMate, a full-stack e-commerce app with product browsing, search, categories, authentication, cart, wishlist, checkout, and order history, plus an admin dashboard to manage orders, add products, update stock, and view registered users.
- Deployed React frontends on Vercel and Node.js and MongoDB backends on Render, and fixed production issues including page routing on reload, environment configuration, and CORS settings.
- Used Git and GitHub for version control across all projects.

Projects

- **BizTrack** (TypeScript, React, Node.js, Express, MongoDB, Jest, Vercel, Render): invoicing and inventory app with owner and staff roles, PDF invoices, and a sales dashboard. Live demo with demo logins on the login page.
- **ShopMate** (React, Node.js, MongoDB, Vercel, Render): full-stack e-commerce app with login, wishlist, orders, and an admin dashboard. Live demo
- **Portfolio website** (HTML, CSS, JavaScript, Firebase): responsive site with a contact form that saves to Firestore and a password-protected admin inbox with search and filters.
- **Survey form, product landing page, and travel guide documentation** (HTML, CSS): responsive, mobile-first sites, all live on GitHub Pages.

Skills

- **Frontend:** HTML5, CSS3, JavaScript, TypeScript, React, Flexbox, CSS Grid, responsive design
- **Backend:** Node.js, Express.js, MongoDB, REST APIs, authentication (JWT), automated testing (Jest, Supertest), Firebase (Firestore and Authentication)
- **Tools and deployment:** Git, GitHub, Vercel, Render, GitHub Pages

Education

Higher National Diploma (HND), Business Administration and Management

Institute of Management and Technology (IMT), Enugu, Nigeria | Started November 2022, expected graduation October 2027
